Contact details: Johann Kriek - 083 321 8707 - johann@kriekheli.com / Jacques Kriek - 083 235 1993 - info@mattanu.com

Runway heading: 02 / 20

Gps coordinates: (Degrees, minutes, seconds)
28°22'49.64"S / 24°29'2.70"E

Elevation: 3560ft amsl

Length: 1150 meters

Width: +/- 14 meters

Turning circle on the Northern end & parking area at the South

Warnings: Wildlife fence at the Northern & Southern side of the strip 2.4 meters high. The runway has a gradual bump on the Northern side, please be careful during landings from the North or take-offs from the South.

The runway is built up quite high on certain sections to keep it level on the terrain. Please stay in the centre of the runway at all times. There is a wildlife breeding area to the North of the runway, please climb as soon as safe and practical and try to follow the main dirt road during departures and approach. The runway is fenced-off, but we recommend doing a low level inspection flight prior to landing, to ensure the condition is good & no wildlife is present on the runway.

Kind regards

Johann Kriek
